

Suggested AT Commands for Cavli Modules

- **AT+CAVINFO?**

Returns a single-line snapshot of the module's identity, SIM status, network status, and signal quality. Useful for quick diagnostics without issuing multiple commands.

```
+CAVINFO:
Model: C10QM, IMEI: 865234050001234
ICCID: 8991101200001234567, SIM: Ready
Operator: Jio 4G, Mode: LTE, RSSI: -73 dBm
```

- **AT+CAVNETRESET**

Resets the network stack, clears existing PDP contexts, and re-registers the device to the network. Helps recover from bad network states without a full reboot.

```
+CAVNETRESET: OK
Network stack cleared. Re-registering...
```

- **AT+DEBUGLOG?**

Returns a short event log of recent system activities like boot, SIM events, attach/detach, or failures. Useful for debugging without live logging enabled.

```
+DEBUGLOG:
[00:00] Boot
[00:05] SIM inserted
[00:06] Registered to LTE
[03:21] PDP context activated
[05:15] Network detach (signal lost)
[05:16] Re-registration started
```
